

Draft Schedule for CTTI Cohort II Math

Type	Activity (and location)	Draft Dates
Network	Day-long symposium on CTTI	June 4, 2011
Workshop 1	Leadership in schools (UIC)	June 22 – June 24, 2011
Course 1	<i>Making sense of numbers & symbols:</i> The course will discuss how concrete exploration of number can help students make sense of the symbolic algebraic manipulations necessary for success in high school and early college mathematics. (DePaul)	June 27 – July 21 (M, W, and Th except for July 4, from 1:00 to 4:15)
Network	Day-long symposium on CTTI	September 17, 2011
Course 2	<i>Data analysis and modeling:</i> This course will introduce teachers to mathematical modeling concepts directly related to high school mathematics and introduce them to sensors and data loggers that they can use in their classrooms. (UIC)	August 25 – December 8, 2011 (Thursday evenings, 5:00 to 8:00)
Course 3	<i>Logic and the Secondary Mathematics Curriculum.</i> This course will focus on the role of logic in mathematical reasoning and its relationship with the secondary mathematics curriculum. (DePaul)	January 10 – March 13, 2012 (Tuesdays, 5:00 to 8:15 pm)
Network	Day-long symposium on CTTI	June 2, 2012
Course 4	<i>Investigating pedagogical content knowledge for mathematics teaching:</i> Teachers will identify and explore the mathematical themes that will form the content of 12th grade courses. This course will draw on the three content courses as well as the workshop on course planning and implementation. (DePaul)	April 10 – June 5, 2012
Workshop 2	Leadership in mathematics teaching (UIC)	Summer, 2012
Network	Day-long symposium on CTTI	September, 2012
Workshop 3	Incorporating new science and mathematics content into HS programs (monthly meetings)	Fall, 2012 – Spring, 2013

Draft Schedule for CTTI Cohort II Life and Environmental Science

Network	Day-long symposium on CTTI	June 4, 2011
Workshop 1	Leadership in schools (UIC)	June 22 – June 24, 2011
Course 1	<i>Environmental Issues: Focus on Water:</i> Teachers will use qualitative and quantitative analytical tools to describe processes in natural and engineering systems, applying these methods to Chicago-area environmental scenarios, including lakes and reservoirs, streams and rivers, and environmental reactor systems. (Northwestern)	June 28 – July 28, 2011 (Tuesdays and Thursdays from 9:00 to 12:00)
Network	Day-long symposium on CTTI	September 17, 2011
Course 2	<i>Environmental Science: Focus on the Biological Removal of Pollution.</i> The purpose of this 11-week environmental science course for high school science educators is to develop an understanding of the biological removal of pollution, including topics such as the use of aerobic bacteria to decrease the cost of the wastewater treatment process. (IIT)	September 8 – December 1, 2011 (most classes on Thursdays from 5:00 to 7:30)
Course 3	<i>Energy, Transportation, and the Environment:</i> This course uses the automobile to provide teachers with an integrated study of fundamental chemistry (thermodynamics, atmospheric chemistry, free radical reactions), industrial production, energy use, and public policy. (Northwestern)	March - June, 2012
Network	Day-long symposium on CTTI	June 2, 2012
Course 4	<i>Investigating pedagogical content knowledge for science teaching:</i> Science education has advanced on many fronts through the formulation of overall conceptual frameworks and the development of research-based understandings of student learning. This final course will cover recent research in the teaching and learning of science. (IIT)	Summer, 2012
Workshop 2	Leadership in science teaching (IIT)	Summer, 2012
Network	Day-long symposium on CTTI	September, 2012
Workshop 3	Incorporating new science and mathematics content into HS programs (monthly meetings)	Fall, 2012 – Spring, 2013
